

19. LOWER EXTREMITY VENOUS R/O DVT PROTOCOL

Dual Image:

1. Trans CFV with & w/o compression
2. Trans SFV Prox with & w/o compression
3. Trans SFV Mid with & w/o compression
4. Trans SFV Distal with & w/o compression
5. Trans POP V. with & w/o compression

Augmentation:

1. Sag SFV Mid

- Once DVT located check thrombosed vein with color instead of compression in order to avoid causing PE.
- If DVT located in CFV check Iliac veins and IVC to determine proximal extent of DVT.

If patient presents with focal redness and/or pain, check for focal thrombophlebitis in that area in addition to above exam.
